DETAILED ACTION

1. In view of the amendment of September 29, 2006, previous 102(e) rejection on claims 1-14 and 21-25 over Furukawa'603 and previous objection on claim 3 are hereby withdrawn.
2. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 1752

4. Claim 3 is rejected under 35 U.S.C. 102(b) as being anticipated by Sakurai et al (JP 9-274321 and its machine-assisted English translation provided by JPO).

Sakurai teaches (see [0194] of English translation and Table 1 in [0214]) a curable composition (Sample #106 in Table 1) containing a copolymer CP-8, dipentaerythritol hexaacrylate (present polymerizable compound), and a pigment dispersion (carbon black). Carbon black teaches present infrared absorbent. The copolymer CP-8 is shown in [0079] of the Japanese document and is also shown below:

The second repeating unit shown above teaches present Formula (I), and the first repeating unit shown above teaches present repeating unit having an amide group. Sakurai also teaches adding a polymerization initiator to the polymerizable compound in [0173]. Therefore, Sakurai teaches present invention of claim 3.

Allowable Subject Matter

5. Claims 1, 2, 4-14 and 21-25 are allowed. Furukawa'603 does not teach or suggest present Formula (A) or Formula (C) (in Formula (C), Z cannot be a phenylene group) in claims 1 and 6.

Response to Arguments

6. Applicants argue unexpectedly superior results of present invention of claim 3. However, applicants' argument is found to be unpersuasive in view of the fact that the present rejection on claim 3 is a 102(b) rejection, not a 103(a) rejection.

Art Unit: 1752
